Invariant Relational Selection and Approximate Symmetry

Kirtus Justus

Theoretical Physicist

Port Coquitlam, British Columbia, Canada

Baseline edition, 12 November 2026

Contents

Part	Title	Page
1	Invariant Relational Selection and Approximate Symmetry	2

Formal statements

Identifiers are those of the program theorem registry. Page numbers refer to this file.

Identifier	Statement	Page
G6-01-01	Theorem 1 (multiplicity trichotomy)	3
G6-01-02	Corollary 2 (center information)	3
G6-01-03	Theorem 3 (spectral support and connected components)	3
G6-01-04	Corollary 4 (maximal algebra fails to discriminate connected geometries)	4
G6-01-05	Theorem 5 (gauge-relative reconstruction from cycle data)	4
G6-01-06	Proposition 6 (exact two-dimensional test)	5
G6-01-07	Theorem 7 (quantified symmetry restoration)	5

Acknowledgments and contributions

Kirtus Justus directed the research questions, the selection of mathematical models and the publication standards, is the sole named author, and is responsible for the claims presented here. ChatGPT (OpenAI) assisted with derivations, critical checks and manuscript preparation. Claude (Anthropic), Gemini (Google), Grok (SpaceXAI) and DeepSeek (High-Flyer) contributed to the wider research process; attribution of particular arguments is limited to traceable records. Editorial preparation of this edition: Claude (Anthropic). Assistance does not imply provider endorsement, external peer review or institutional endorsement.
