1	Calibrated Dynamical Identification in Fermionic Systems	2

Formal statements

Identifiers are those of the program theorem registry. Page numbers refer to this file.

Identifier	Statement	Page
C3-01-01	Proposition 1.1 (A fixed occupied subspace)	2
C3-01-02	Proposition 1.2 (Stationarity of the specified preparation)	3
C3-01-03	Proposition 1.3 (A bounded number-conserving probe)	4
C3-01-04	Proposition 1.4 (Number-conserving quadratures)	5
C3-01-05	Proposition 1.5 (Exact aliases and instability on an unbounded range)	6
C3-01-06	Proposition 1.6 (Two resolved gaps in a two-parameter family)	7
C3-01-07	Theorem 2.1 (Simultaneous confidence with a nuisance budget)	8
C3-01-08	Corollary 2.2 (Stability on a bounded frequency range)	9
C3-01-09	Corollary 2.3 (Joint scale and shape confidence by inverse image)	9

Acknowledgments and contributions

Kirtus Justus directed the research questions, the selection of mathematical models and the publication standards, is the sole named author, and is responsible for the claims presented here. ChatGPT (OpenAI) assisted with derivations, critical checks and manuscript preparation. Claude (Anthropic), Gemini (Google), Grok (SpaceXAI) and DeepSeek (High-Flyer) contributed to the wider research process; attribution of particular arguments is limited to traceable records. Editorial preparation of this edition: Claude (Anthropic). Assistance does not imply provider endorsement, external peer review or institutional endorsement.
